

## Minimum System Requirements for Workflow WFX

### Server Requirements:

- Pentium compatible, 2GHz or faster CPU, dual core recommended
- Minimum 2GB;4 GB recommended
- 512MB hard disk space, plus proportional space for data repository
- Windows 2008 Server or later, Windows XP SP2, Windows Vista Business or Ultimate
- .NET Framework 2.0
- .NET Framework 3.5 sp1
- SQL Server 2008 R2 or later
- Setup program automatically installs required software, except for the operating system, if not already present on the target machine
- Microsoft Office must be installed in order to pull text from Office documents.
- Adobe Acrobat Reader must be installed in order to pull text from Adobe documents.

### Setup prerequisites:

- Internet Information Services (IIS) must be installed and enabled prior to starting setup
- SQL Server instance named QUESTYSX, with full-text service installed and enabled. If the default instance is not found, setup will automatically install new SQL Server 2008 R2 Express with Advanced Services SP2 instance named QUESTYSX
- Ensure that the Distributed Transaction Coordinator service is configured for automatic startup and is started
- The user account running setup must have administrative privilege on the server
- Recommend install of SQL Server Management Studio

### WFX Email Notification:

- WFX will require configuration of a SMTP server
